DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 11-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kowols(4,490,727) in view of Tanizaki et al.(6,268,833).

Claims 11-12 and 14-17, figure 3 of Kowols discloses a rod antenna(16) and a moveable hollow dielectric body. Kowols discloses manual adjustment of the dielectric body instead of the recited adjusting part, detection part and control device. Figure 8 of Tanizaki discloses adjusting the overlap position of a dielectric body(fig. 3, no. 11) by using a position sensor as a detection part, a stepping motor unit as an adjusting part, and a control device as recited to obtain an improved radiation pattern from an antenna element(cols. 1 & 2).

Claim 13, the dielectric bodies in relative motion disclosed in Tanizaki are parallel and overlapping. Given this disclosure, a parallel rod shaped dielectric would be an obvious modification over the dielectric body disclosed in Kowols.

Art Unit: 2821

Claims 18-20, the limitations recited in these claims, a ceramic dielectric, starting out the overlap at a maximum, and detecting the power of a signal, are obvious modifications of the disclosed device because these are limitations which are well known in the antenna art.

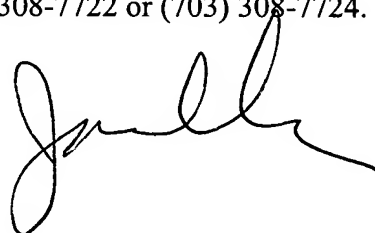

It would have been obvious to one of ordinary skill in the art at the time of the invention to use the adjusting mechanisms disclosed in Tanizaki with the device disclosed in Kowols to obtain an improved radiation pattern from an antenna as disclosed in Kowols.
